THE TRANSITIONAL LEARNING CENTER (TLC)

Tri-fold mission: Treatment, Research and Education. TLC provides a continuum of post-acute rehabilitation services to persons with acquired brain injury in order to improve quality of life and maximize independent functioning in daily living, productive activities, and psychosocial adjustment in the least restrictive environment.

OUR STORY

TLC was established in 1982 by philanthropist Robert L. Moody, Sr. after his son experienced a traumatic brain injury. Mr. Moody recognized the critical need for post-acute brain injury rehabilitation services to further assist in his son’s recovery. Over the decades Mr. Moody has offered financial support towards clinical, education, and research endeavors in the field of acquired brain injury. In its history, TLC has provided comprehensive post-acute brain injury rehabilitation services to approximately 3000 individuals.

WHO WE TREAT

- Traumatic brain injury
- Stroke
- Dual diagnosis: spinal cord injury and brain injury

ADMISSIONS

Admission Criteria: We accept referrals for medically-stable individuals that are 17 years or older for rehabilitation and 18 years or older for long-term care. TLC works with numerous managed care companies and funding sources, including: Private health insurance, workers compensation and state funded agencies. Please call admissions at 1-800-852-4769 for more information about potential funding options.

THE TLC PROCESS

1) Meet with our Community Liaisons and/or take a tour to learn more about our programs and facilities
2) Choose a location and complete the referral by contacting admissions
3) A Liaison will coordinate a visit with the patient and family for an initial screening evaluation to determine the level of care needed
4) An admission specialist will then begin the process of obtaining funding approval
5) Admission day, meet with admissions, case managers and residential staff to assist with transition
6) Begin therapy evaluations to develop specialized treatment plan

"The continuum of care that TLC provides helps awaken my skills necessary for everyday living and affirms the clients needs to continue developing and refining life skills necessary for independence. The community re-entry program was vital in our transition from hospital to home." - Dennis J. Zgaljardic, Ph.D., ABPP/CN

Clinical Director and Neuropsychologist
